ROUGH-IN INNOVATIONS FROM SIOUX CHIEF

Sioux Chief proudly introduces the new StopOut™ Under-Sink Stub Out & Stop Kit.

This convenient system lets contractors install stop valves on rigidly secured stub outs that come up through the floor, protecting the assembly with a single installation during the rough-in phase.

Designed to work with systems like ProPlate™ and OmniPanel™, the StopOut™ system is ideal for applications where supply lines come through the floor, such as kitchen islands or sinks on exterior walls.

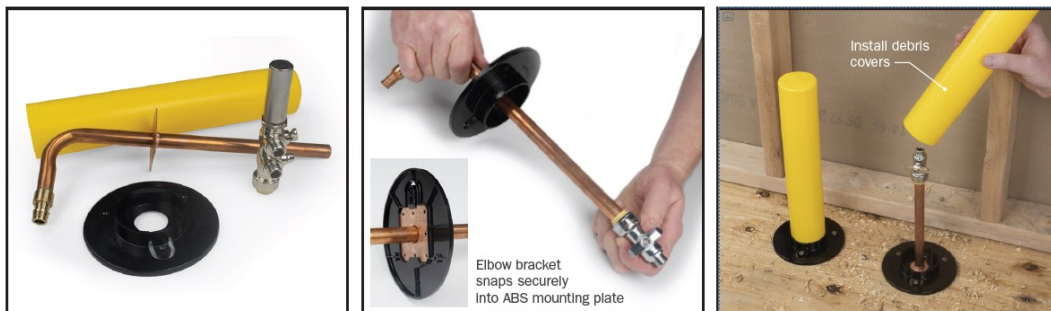

The 689 Series StopOut™ kit includes a copper stub out elbow with bracket, a floor mounting plate, a high-quality brass 1/4-turn stop valve, and a durable, high-vis debris cover that locks into the floor plate.

Stop valve options include a single 3/8" compression model and two models with integral MiniRester™ water hammer arresters—one with dual 3/8" compression outlets and one with 3/8" and 1/4" outlets. The stub out elbow is available for either F1807 PEX or F1960 PEX connections.

During the final installation, cabinets are placed over the assembly, the covers are removed, and the supply lines are connected.

StopOut™ Kits are in stock and available through Sioux Chief!
